AI REALTIME INCIDENT ANALYSIS

THE FUTURE OF AI-POWERED WORKPLACE SAFETY

AIRIA represents the next generation of intelligent workplace technology, a sophisticated AI system engineered to integrate seamlessly with your existing CCTV infrastructure. It provides a real-time, automated health and safety overview of both your workforce and critical assets.

Using advanced computer vision AI, AIRIA continuously detects potential hazards, automates safety responses, and instantly alerts personnel for rapid intervention. With 24/7 active monitoring, it eliminates the need for manual safety audits and ensures continuous situational awareness across your operations.

By delivering data-driven insights, AIRIA empowers organisations to identify risks earlier, optimise safety processes, and measure the real impact of behavioural and procedural changes. Leadership teams can finally transition from reactive incident management to proactive, real-time prevention, creating a safer, smarter, and more efficient workplace for everyone.

AI-Driven Safety, Every Hour of Every Day

Enabling Real time Safety Mitigation

- Instantly detects hazards and safety violations.
- Automates responses (e.g., shutting down machines).
- Alerts personnel for immediate intervention.

Providing Data-Driven Insights for Continuous Improvement

- Delivers quantitative analytics to identify risks and inefficiencies.
- Enables proactive decision-making for enhanced safety protocols.

Reducing the Need for Manual Audits

- 24/7 intelligent monitoring eliminates reliance on periodic checks.

Measuring Impact & Effectiveness

- Tracks and compares safety performance before vs. after implementation.
